Bachelor of Science in Information Technology [BSIT]

Curriculum Description

The curriculum for BSIT includes the required GE courses, six (6) core courses common to all ITE programs, professional courses required for the BSIT program, and electives. The students are also required to undertake practicum work and complete a capstone project.

The Information Technology curriculum combines technical, professional, and general education components to prepare students for a career, further study, and lifelong professional development in the computing discipline associated with the program. Also, the program includes basic and advanced courses on planning, development, integration and management of information technology.

Program Objectives

The graduates of BS Information Technology program, about three to five years after graduation shall:

1. Help create innovations to ensure the competitive edge of the Philippine computing industry.

2. Adhere to ethical standards in the practice of the computing profession.

3. Apply knowledge of computing basics, knowledge of computing specialization, and mathematics, science, and domain knowledge relevant for computing specialization to the abstraction and conceptualization of computer models from identified issues and needs

Program Outcomes

1. Ability to analyze complex computing problems and to apply principles of computing and other relevant disciplines to identify solutions.

2. Ability to design, implement, and evaluate computing-based solutions to meet a given set of computing requirements in the context of the program's discipline.

3. Ability to communicate effectively in a variety of professional contexts.

4. Ability to recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.

5. Ability to function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.

6. Ability to identify and analyze user needs and to take them into account in the selection, creation, integration, evaluation, and administration of computing-based systems.
